

Foxglove Beardtongue

Snapdragon Family
(Penstemon digitalis)

Foxglove Beardtongue has 5-lobed white flowers growing in a stalked cluster. Each 1-inch flower has a tuft of hairs on one of its stamens, hence its 'bearded tongue'. The flower tube is abruptly swollen in the middle. It grows 2-4 feet high in fields and open woods, blooming in late spring and early summer.

Native species.
